

WHS RISK ASSESSMENTS

Have you identified ALL of the critical risks in your workplace?

WHS legislation requires every business to identify and understand the hazards presented by their work activities, materials and substances used and work systems. If you would like assistance to develop processes and identify hazards, Ai Group can assist.

Manual tasks

Work Systems

Processes

Chemicals

Equipment

Have you assessed the risk of injury from your hazards?

Once you have identified your hazards you need to understand the risks the hazards present.

- What injuries or ill health could occur if workers (or others) are exposed to those hazards?
- How often could it occur and how bad could the injury or illness be?
- What are you currently doing about the risks and are those actions preventing injury or illness as far as is reasonably practicable?

This process should be undertaken for all hazards so that actions to reduce risk can be undertaken in priority order. No business can fix everything at once! If you are unsure how to go about assessing the risks your hazards present, Ai Group can help.

Risk Assessment

- ◀ How could an injury or ill health occur?
- ◀ How bad could it be?
- ◀ How often is someone exposed to the hazard?
- ◀ What are we already doing about the hazard?

Identify Hazards

Monitor

Assess Risk

Eliminate/Control Risks

Safe and healthy workplace

Safe and healthy workplace

Making your workplace safe doesn't need to be complicated

4 simple steps can make big improvements to safety at your workplace and we are here to help:

1. Ai Group Safety Consultants can assist you to identify your hazards through a site inspection.
2. We can then work with your managers and workers to step you through a risk assessment of your critical risks. We will guide and upskill your workers in the process and provide you with a record of your risks.
3. We can assist you in providing recommendations for eliminating hazards if possible, or controlling the risks presented by your hazards.
4. Monitor what you have put in place. Make sure the fixes are working and that your workers are following correct procedures. If necessary or as better controls are available, make changes to ensure continuous improvements.
